

Pedro Delgado

Electronics and telecommunications engineering degree by Universidade de Coimbra in 1978
Post Graduation in six sigma black belt by Instituto Politecnico de Leiria in 2009.
Jubilee in 2019.

Worked at Centro de Estudos de Telecomunicações-Portugal Telecom, Grundig and Bosch car multimedia where he developed automatic test equipment for production lines for switching telecom stations, HiFi, car Radio and telephone production lines. He dedicated special attention to the applications of statistics in the planning, control and improvement of quality of industrial products and processes. He participated in the team that launched the partnership Bosch/UM and installed the first innovation projects launched by this partnership. As part of these projects he had special participation in the development and installation of multivariate statistical process control based on Principal Component Analysis.
